

Creating journals in Day One for iOS

How to create additional journals in Day One on iOS

Day One Plus and Premium users can create more than one journal. This is a great way to organize your data into different categories.

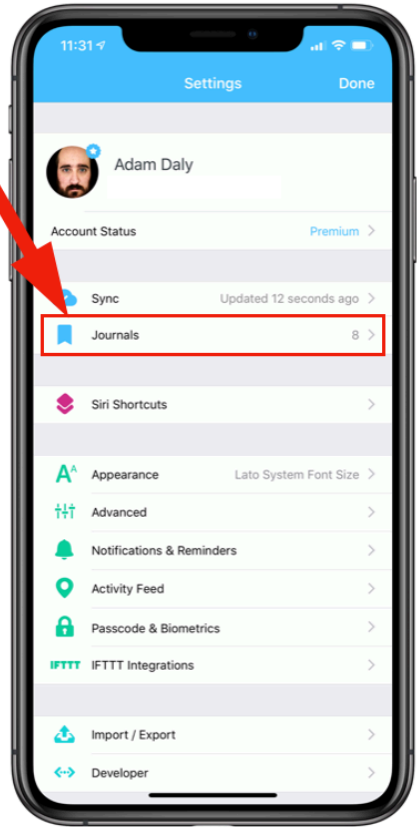

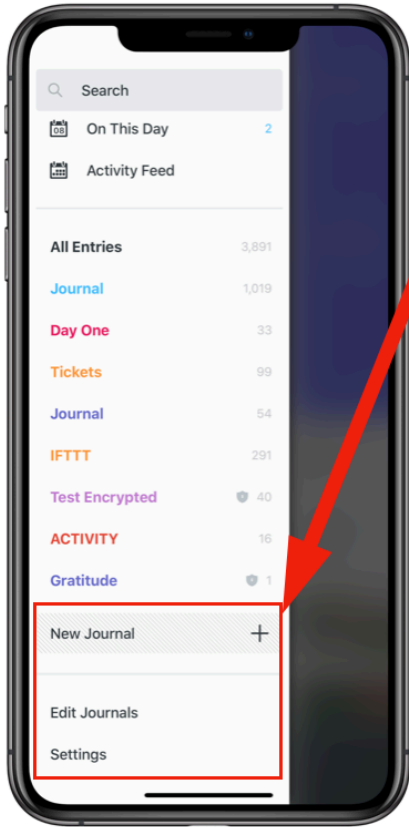

Plus (Grandfathered): 10 journals

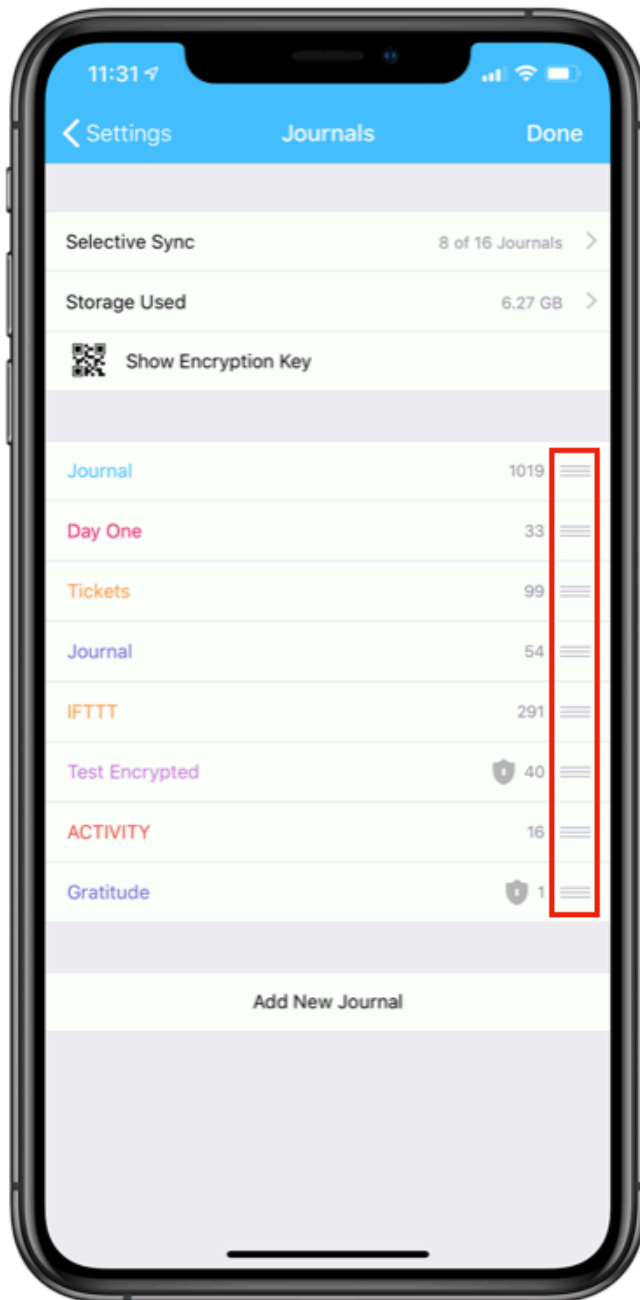

Premium: Unlimited journals

Swipe from left to right on the Timeline screen to access the [Journal Drawer](#) and scroll to the bottom. Tap *New Journal* for a shortcut to creating a new journal. Tap *Edit Journals* to access the journal settings.

Or tap the Settings icon  at the top right, then tap *Journals*.

Tap on any image to enlarge.

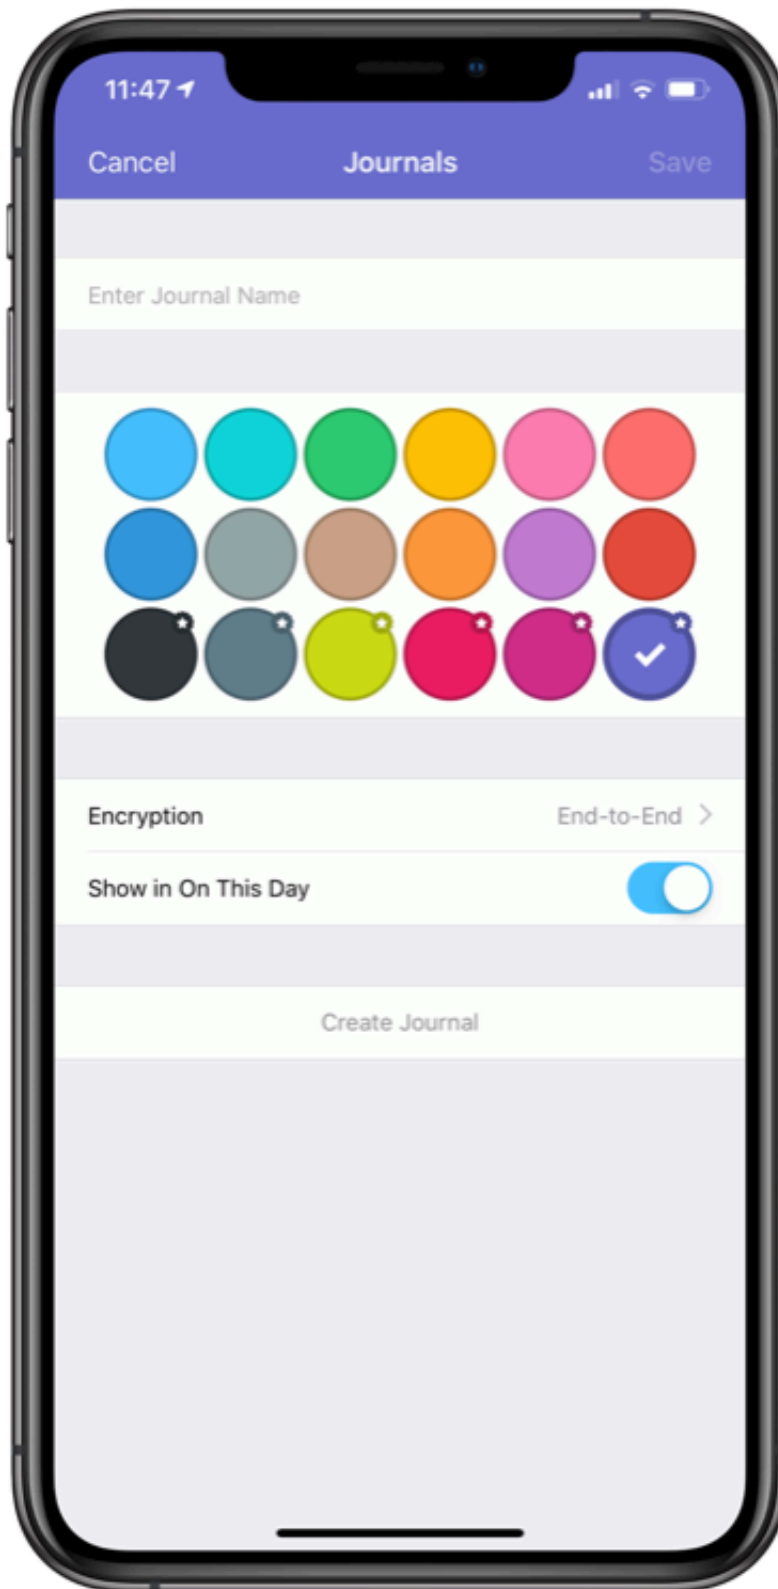

- Choose which journals to store locally
- View local storage use
- View encryption key/settings

- Tap and drag to rearrange journals

- Tap to Add New Journal

Add New Journal

Here you can name the journal, choose a color, choose the encryption option for this journal, and choose to include the journal in On This Day notifications.

Encryption

The Standard option encrypts the data "at rest" on our servers and securely transfers the data from our servers to the Day One app. This is the same level of encryption offered by iCloud or Dropbox.

[End-to-end encryption](#) utilizes a private key to encrypt all data before it reaches the server. The server will have no access to unencrypted data. We recommend that users save a copy of the encryption key. *If users lose their encryption key and access to Day One, encrypted data may not be recoverable.*
